

Эта встреча состоится 3.10.18 в 19.15 в ауд. 506 / 4

И000 «ЕРАМ Systems» и кафедра экономической информатики приглашают на профориентационное мероприятие всех заинтересованных студентов имеющих:

- опыт работы с информационными технологиями (базы данных, программирование, бизнес-процессы, методологии разработки и т. д.);
- большое желание развивать технические навыки

Performance optimization is a discipline on creation of maximum efficient computer systems. The main goal of the performance analyst is to find out why an application functions slower than required and to help with that issue resolution. The position is at the junction of system analysis, administration, testing and development. It requires deep understanding of the work of all computer systems components from networks and server hardware to the rendering process in browsers.

During the lecture we'll cover next questions:

- who is performance analyst
- how to become a performance analyst
- what you'll need to become a performance analyst
